

Ohne Erregung und ein reeller EW

$\lambda = 0$ und Matrix $\mathbf{A} = \mathbf{0}$

- stabil
- Ebene von Ruhelagen

$\lambda = 0$ und Matrix $\mathbf{A} \neq \mathbf{0}$

- instabil

$\lambda < 0$ und $\mathbf{A} \neq \begin{bmatrix} \lambda & 0 \\ 0 & \lambda \end{bmatrix}$

- asymptotisch stabil
- Knoten 3. Art

$\lambda > 0$ und $\mathbf{A} \neq \begin{bmatrix} \lambda & 0 \\ 0 & \lambda \end{bmatrix}$

- instabil
- Knoten 3. Art

$\lambda < 0$ und $\mathbf{A} = \begin{bmatrix} \lambda & 0 \\ 0 & \lambda \end{bmatrix}$

- asymptotisch stabil
- Knoten 1. Art

$\lambda > 0$ und $\mathbf{A} = \begin{bmatrix} \lambda & 0 \\ 0 & \lambda \end{bmatrix}$

- instabil
- Knoten 1. Art

Ohne Erregung und zwei reelle EW

$\lambda_2 < \lambda_1 < 0$

- asymptotisch stabil
- Knoten 2. Art

$0 < \lambda_1 < \lambda_2$

- instabil
- Knoten 2. Art

$\lambda_1 < 0 < \lambda_2$

- instabil
- Sattelpunkt

$\lambda_2 < 0 < \lambda_1$

- instabil
- Sattelpunkt

$\lambda_2 < 0 = \lambda_1$

- stabil

$\lambda_1 = 0 < \lambda_2$

- instabil

Mit Erregung und reellen EW

$\lambda_2 < 0 = \lambda_1$

- instabil

$\lambda_1 = 0 < \lambda_2$

- instabil

$\lambda_1 = \lambda_2 = 0$ und $\mathbf{A} \neq \mathbf{0}$

- instabil

Ohne Erregung und komplexen EW

$\alpha < 0; \beta > 0$

$\lambda_{1,2} = \alpha \pm j\beta$

- asymptotisch stabil
- Strudelpunkt
- Drehsinn in x_1/x_2 -Ebene evtl. anders!

$\alpha > 0; \beta > 0$

- instabil
- Strudelpunkt
- Drehsinn in x_1/x_2 -Ebene evtl. anders!

$\alpha = 0; \beta > 0$

- stabil
- Wirbelpunkt
- Drehsinn in x_1/x_2 -Ebene evtl. anders!
